50 PIC Microcontroller Projects: For Beginners and Experts By Bert Van Dam

This book contains 50 fun and exciting projects for PIC microcontrollers such as a laser alarm, USB teasing mouse, eggtimer, youth repellent, soundswitch, capacitive liquid level gauge, "finger in the water" sensor, guarding a room using a camera, mains light dimmer (110-240 volts), talking microcontroller and much more. Several different techniques are discussed such as relay, alternating current control including mains, I2C, SPI, RS232, USB, pulse width modulation, rotary encoder, interrupts, infrared, analog-digital conversion (and the other way around), 7-segment display and even CAN bus.

You can use this book to build the projects for your own use. The clear explanations, schematics and even pictures of each project make this a fun activity. For each project the theory is discussed and why the project has been executed in that particular way. That means you can also use this book as a studybook, or as basis for larger and more complicated projects. All projects use a breadboard so modification and expansion is easy.

Three PIC microcontrollers are used, the 16f877A, 18f4455 and 18f4685. It is also discussed how you can migrate your project from one microcontroller to another - 15 types are supported - including two example projects.

All software that is used in this book can be downloaded for free. That also applies to the open source programming language JAL. This powerful and yet easy to learn language is used by hobbyists as well as professionals.

This book can also be used as a reference guide. It explains all JAL commands, as well as the expansion libraries. Using the index you can easily find example projects that illustrate the use of these commands. Even when you have built all projects in this book you will still want to keep it within arm's reach.

Have you spare time for just a day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity for spend your time. Any person spent all their spare time to take a stroll, shopping, or went to the particular Mall. How about open or perhaps read a book called 50 PIC Microcontroller Projects: For Beginners and Experts? Maybe it is to get best activity for you. You know beside you can spend your time using your favorite's book, you can wiser than before. Do you agree with it is opinion or you have different opinion?

Jane Kim:

The experience that you get from 50 PIC Microcontroller Projects: For Beginners and Experts is the more deep you searching the information that hide inside words the more you get serious about reading it. It doesn't mean that this book is hard to comprehend but 50 PIC Microcontroller Projects: For Beginners and Experts giving you joy feeling of reading. The article author conveys their point in particular way that can be understood by means of anyone who read this because the author of this reserve is well-known enough. That book also makes your personal vocabulary increase well. That makes it easy to understand then can go together with you, both in printed or e-book style are available. We highly recommend you for having this specific 50 PIC Microcontroller Projects: For Beginners and Experts instantly.

Willie Collins:

Information is provisions for individuals to get better life, information nowadays can get by anyone with everywhere. The information can be a understanding or any news even a problem. What people must be consider when those information which is from the former life are hard to be find than now could be taking seriously which one would work to believe or which one often the resource are convinced. If you obtain the unstable resource then you understand it as your main information it will have huge disadvantage for you. All those possibilities will not happen with you if you take 50 PIC Microcontroller Projects: For Beginners and Experts as your daily resource information.
