Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury By Barbara Zoltan MA OTR/L

Vision Perception and Cognition, Fourth Edition is a concisely structured text that expertly addresses clinical reasoning and decision making for the entire evaluation and treatment process of the adult with acquired brain injury. Provided are theoretical information, guidelines for both static and dynamic assessment, information on specific standardized evaluations, guidelines for adaptive and restorative treatment based on described theoretical and evidence-based information, and information on environmental impact of client performance.

Inside this best-selling book, Barbara Zoltan, MA, OTR/L addresses visual, perceptual, and cognitive evaluation and treatment, providing structure, clarity, and content suitable for both students and experienced clinicians.

Updated and expanded to reflect current practice and relevant research, ***Vision, Perception, and Cognition, Fourth Edition*** is a unique resource that takes the reader from theory to practice in a practical and detailed way.

Students and clinicians will benefit from the numerous tables, figures, and extensive references presented throughout the text, as well as the inclusion of a glossary, for easy reference to terminology used throughout ***Vision, Perception, and Cognition, Fourth Edition***. Faculty will be impressed by the addition of an on-line instructor's manual for additional classroom learning objectives and activities.

Component areas covered include:

- Primary visual skills
- Apraxia and agnosia
- Visual discrimination skills
- Orientation

- Attention
- Memory
- Self-awareness and monitoring
- Planning and organization
- Problem solving and decision making
- Categorization
- Mental flexibility
- Abstraction
- Generalization and transfer
- Acalculia

New topics addressed in this Fourth Edition:

- Constraint-induced therapy
- Brain plasticity/Functional reorganization
- Neuroimaging
- Specific occupation-based models and evaluations
- Contextual influence on client performance
- Client-centered practice
- Client learning capacity
- Clinical reasoning
- Interviewing
- Standardization
- Visual vestibular processing
- Pupillary response
- Contrast sensitivity

Whether you are a student or clinician in the area of occupational therapy, physical therapy, neuropsychology, optometry, or speech pathology, ***Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury, Fourth Edition*** will continue to be an invaluable resource for exploring theory and practice in the evaluation and treatment processes.

Editorial Review

Review

"This is a very well researched and referenced text that effectively integrates the author's many years of experience with research evidence. It provides the student and practicing clinician with many helpful resources, including specific standardized assessments, occupationally based assessments and dynamic assessments as well as additional references to consult for further reading. As each chapter addresses a particular set of deficits and skills, clinicians can also quickly refer to specific chapters of interest as questions arise in their practices."

— Mary Kita, *Canadian Journal of Occupational Therapy*

"This book is affordable, and although aimed at occupational therapists, it would be useful for physiotherapists specializing in neurological rehabilitation, and health professionals who wish to understand more about visual, perceptual and cognitive functioning."

— Margaret J. Mayston, *Physiotherapy*

"The strength of the book lies in the chapters relating to cognitive-perceptual functions, most of which provide sufficient (but not overwhelming) background material on the function, highly detailed descriptions of evaluation methods, and moderately thorough reviews of treatment interventions. The best discussions relate to evaluation and assessment measures, each of which is a highly detailed set of guidelines that clinicians can readily follow in their patient care activities. This is a useful book for practicing clinicians and students in rehabilitation therapy disciplines, providing the appropriate theoretical and scientific support for certain clinical activities, but mostly providing extensive, detailed, and easy-to-follow guidelines on clinical assessment techniques for patients with cognitive, perceptual, and visual dysfunction. There are several new clinical techniques discussed in this edition that were not included in prior version."

— Elliot J. Roth MD, *Rehabilitation Institute of Chicago, Doodly Enterprises, Inc.*

About the Author

Barbara Zoltan, MA, OTR/L is a consultant in Southern California. She obtained her bachelor's degree in Occupational Therapy from Tufts University and her master's degree from the University of Southern California. She holds certifications in both sensory integration and neurodevelopmental treatment and has served on the editorial boards of the *Journal of Head Trauma Rehabilitation* and *Occupational Therapy in Health Care*. Her more than 20 years of experience specializing in neurological rehabilitation has included a broad range of research, teaching, administrative and clinical practice. She has published over 20 articles, chapters, and books related to the adult with acquired brain injury.

Users Review

From reader reviews:

Jose Suh:

The book Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury can give more knowledge and also the precise product information about everything you want. Why must we leave a very important thing like a book Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury? A number of you have a different opinion about publication. But one aim that will book can give many information for us. It is absolutely appropriate. Right now, try to closer along with your book. Knowledge or info that you take for that, you could give for each other; you may share all of these. Book Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury has simple shape nevertheless, you know: it has great and massive function for you. You can look the enormous world by start and read a guide. So it is very wonderful.

Patrice Reese:

Information is provisions for folks to get better life, information nowadays can get by anyone on everywhere. The information can be a knowledge or any news even a problem. What people must be consider any time those information which is inside former life are challenging be find than now could be taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you get the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury as the daily resource information.

Sara Pacheco:

Spent a free the perfect time to be fun activity to accomplish! A lot of people spent their spare time with their family, or all their friends. Usually they doing activity like watching television, gonna beach, or picnic within the park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own personal free time/ holiday? Might be reading a book might be option to fill your cost-free time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to try look for book, may be the book untitled Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury can be very good book to read. May be it can be best activity to you.

Philip Mejia:

Is it a person who having spare time after that spend it whole day by simply watching television programs or just telling lies on the bed? Do you need something new? This Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury can be the reply, oh how comes? A fresh book you know. You are so out of date, spending your extra time by reading in this fresh era is common not a geek activity. So what these books have than the others?
