

101 Careers in Mathematics - Third Edition (Classroom Resource Materials)

By Andrew Sterrett

101 Careers in Mathematics - Third Edition (Classroom Resource Materials) By Andrew Sterrett

This third edition of the immensely popular *101 Careers in Mathematics* contains updates on the career paths of individuals profiled in the first and second editions, along with many new profiles. No career counselor should be without this valuable resource.

The authors of the essays in this volume describe a wide variety of careers for which a background in the mathematical sciences is useful. Each of the jobs presented shows real people in real jobs. Their individual histories demonstrate how the study of mathematics was useful in landing well-paying jobs in predictable places such as IBM, AT&T, and American Airlines, and in surprising places such as FedEx Corporation, L.L. Bean, and Perdue Farms, Inc. You will also learn about job opportunities in the Federal Government as well as exciting careers in the arts, sculpture, music, and television. There are really no limits to what you can do if you are well prepared in mathematics.

The degrees earned by the authors profiled here range from bachelor's to master's to PhD in approximately equal numbers. Most of the writers use the mathematical sciences on a daily basis in their work. Others rely on the general problem-solving skills acquired in mathematics as they deal with complex issues.

Editorial Review

Review

This is a wonderful book, potentially of great value to students and those who advise them. It has some frustrating gaps too, but in a way they also emphasize how useful it is and could be. In brief, this book presents a collection of profiles of people who have (or had) a career that involves some aspect of mathematics. Nearly all the people here have at least one degree in mathematics; the few exceptions have degrees in fields like physics, operations research, or a statistics-related area. Short essays at the end of the book discuss the processes of interviewing and finding a job, and what it's like to work in industry (or, more broadly, outside the academic community).

There are 25 new entries in this new edition that bring the total number of profiles to 146. The "101 Careers" of the title is best regarded as meaning "lots of careers"; even the first edition had more than 101 profiles. Counting careers is also a little funny: they don't match up one-to-one with people. As many of the profiles demonstrate, many people have more than one career. Indeed it is increasingly uncommon for people to have a single career throughout their lives.

The first edition of this book was published in 1996, the second in 2002, and this update follows 14 years later. How have careers and career decisions changed since 1996? What's the effect of a couple of minor recessions and one big one? New kinds of careers in mathematics-related fields have developed in the last decade--in mathematical finance, data science, biotechnology. Jobs that involve "big data" are proliferating now. Can we extrapolate from the stories told here to guess how careers might develop in the next decade? There is so much good data here that it is a temptation to wish that it had been assembled and analyzed more completely and methodically. But one of the great virtues of the book is that it is anecdotal. These are individuals telling their stories about their lives and careers.

There are interesting and useful messages here for students. Some are explicit in the essays that conclude the book. Others are implicit in the profiles. Many of these point to the importance of flexibility and breadth of interests, or to the considerable value of well-developed communications skills and the willingness to learn to speak and understand the special technical languages of colleagues.

I can't think of a better book for advisers to share with students. For anyone with any interest in mathematical careers, pick it up and browse. The sheer variety is fascinating. --Bill Satzer, MAA Reviews

Preface to the third edition: "The Second Edition of *101 Careers* contains more than 125 career profiles, but even that collection did not exhaust all the interesting career opportunities available to undergraduate mathematics majors. Consider, for example, being a program manager for developing a game at Microsoft (Kathie Flood), working on a submarine launched ballistic missile program (Chad Magers), or developing a model from which to invest millions of dollars (Dan Loeb). Their careers, along with many other new profiles and updates of previous profiles are indicated in the Table of Contents of this edition with a (#) sign. These new profiles provide additional evidence of the imaginative use to which mathematics majors apply their degrees. --Mathematical Reviews Clippings

Users Review

From reader reviews:

Dan Morris:

Nowadays reading books become more than want or need but also be a life style. This reading behavior give you lot of advantages. The benefits you got of course the knowledge even the information inside the book that improve your knowledge and information. The info you get based on what kind of reserve you read, if you want attract knowledge just go with schooling books but if you want sense happy read one having theme for entertaining like comic or novel. Often the 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) is kind of e-book which is giving the reader unforeseen experience.

Cheryl Alexander:

This book untitled 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) to be one of several books that best seller in this year, honestly, that is because when you read this book you can get a lot of benefit onto it. You will easily to buy this particular book in the book retailer or you can order it by using online. The publisher on this book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Touch screen phone. So there is no reason to your account to past this guide from your list.

Mary Patterson:

The book untitled 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) is the book that recommended to you to learn. You can see the quality of the reserve content that will be shown to anyone. The language that writer use to explained their way of doing something is easily to understand. The article writer was did a lot of analysis when write the book, to ensure the information that they share to you is absolutely accurate. You also could possibly get the e-book of 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) from the publisher to make you far more enjoy free time.

John Bonilla:

That reserve can make you to feel relax. This kind of book 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) was bright colored and of course has pictures on the website. As we know that book 101 Careers in Mathematics - Third Edition (Classroom Resource Materials) has many kinds or category. Start from kids until young adults. For example Naruto or Investigator Conan you can read and believe you are the character on there. Therefore not at all of book usually are make you bored, any it offers up you feel happy, fun and chill out. Try to choose the best book in your case and try to like reading this.
