Hidden Treasures in the Book of Job: How the Oldest Book in the Bible Answers Today's Scientific Questions (Reasons to Believe) By Hugh Ross

Arguably the oldest book in the Bible, the book of Job has a surprising amount to say about some of the newest scientific discoveries and controversies. Far from a book that is just about suffering, Job is filled with rich insight into both ancient and modern questions about

- the formation of the world
- the difference between animals and humans
- cosmology
- dinosaurs and the fossil record
- how to care for creation
- and more

With careful consideration and exegesis, internationally known astrophysicist and Christian apologist Hugh Ross adds yet another compelling argument to the case for the veracity of the biblical commentary on the history of the universe, Earth, life, and humanity. *Hidden Treasures in the Book of Job* shows that the Bible is an accurate predictor of scientific discoveries and a trustworthy source of scientific information, and that both the book of Scripture and the book of nature are consistent both internally and externally.
